TUNING BOOSTER

PLUG+PLAY PERFORMANCE

**TUNING BOOSTER
BASIC VERSION**

**TUNING BOOSTER
ADVANCED VERSION**

Following the SPRINT BOOSTER's success, BOULEKOS Dynamic presents a new world-wide patented device named TUNING BOOSTER – PLUG+PLAY PERFORMANCE.

TUNING BOOSTER is a plug & play electronic device that can be installed in a minimum amount of time (3 minutes). This device functions as a parallel E.C.U., offering a safe and guaranteed increase in the engine's performance.

TUNING BOOSTER replaces the traditional E.C.U. reprogramming, enabling the vehicle's owner to install it by himself in 3 minutes time.

A great benefit in compare to every after market E.C.U. Reprogramming is that TUNING BOOSTER is capable to be switched on and off anytime, even during driving, with the use of the optional switch (included).

TUNING BOOSTER will soon be available for all current turbocharged engines offered by the most of the car manufacturers.

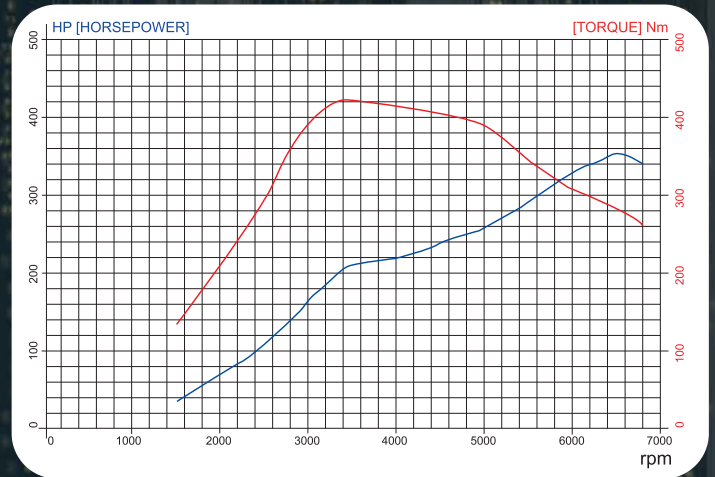

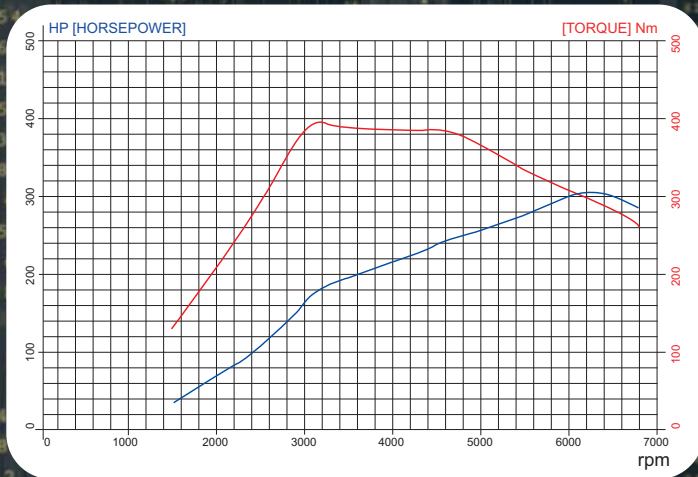

All vehicles were measured in a MAHA LPS 3000 Dyno, using super plus unleaded 100 Octane fuel. The actual performance (HP) may vary + / - 5%, depending on the actual factory figures.
